

directly to the decline of transit and in some communities its demise by refusing to allow fares to increase with inflation and for capital investments to keep the systems healthy.

While the money from the road funds is perhaps the most visible, there were also huge subsidies for overseas defense to protect oil supplies and public ownership of oil and gas supplies. There were dramatic subsidies for public safety, for policing related to the automobile, and the removal of huge tracts of land in the tax rolls and for roads and road right-of-way and, of course, parking and tax subsidies. All of these combined to tip the playing field in favor of the automobile. Consumers responded rationally for themselves but in ways that very much skewed the pattern of transportation development.

Now, these clear transportation subsidies are but a small portion of the overall government interference in the market system. Our investments in public housing concentrated poor minority populations in central cities. We dramatically subsidized utility rates and sewer and water expansion that routinely hid the profits, from providing service to local inner cities, from increased costs associated with expansion into suburbs and greenfields. It resulted in many central city residents paying more for their own utilities and subsidizing lower rates for people outside the cities.

The most direct and obvious interference in the market was the emergence of single-use zoning in metropolitan areas where we made it illegal for the family owning, say, a restaurant or a drugstore from living or having their clerks live above that activity. People were zoned out of mixed-use neighborhoods and literally forced into their cars since the drastic separation of uses forced many Americans to rely increasingly on automobiles, and again that was very rational behavior.

The list goes on and on: flood insurance, water supply, brownfields programs, the Federal Government's own policy of locating facilities out further and further from concentrated uses, or the post office refusing to obey local land use laws and zoning codes. These are all examples of the government's own activities to destabilize neighborhoods in our central cities and our older suburbs.

It is hard for me to imagine any rational observer being able to characterize what has transpired in American communities over the last three-quarters of a century as benign, neutral, inevitable market forces. The challenge today for those who would have livable communities is not to overcome market forces but allow the market forces to work. This is an appropriate use of the political process. It is not a trivial point, as critics attempt to paint efforts for promoting livable communities on the part of the administration, those of us in Congress, or the vast grassroots efforts around the country as somehow social engineering

or forcing people to do what they do not want to do.

It is essential to give legitimacy to the aspirations of thousands of activists in hundreds of communities across the country that are trying to promote livable communities. Just as we have established a pattern of unplanned growth for dysfunctional communities and regions, we can level the playing field to promote livable communities. I look forward to this Congress and this administration taking steps to be partners to promote these more livable communities.

RECESS

The SPEAKER pro tempore. Pursuant to clause 12 of rule I, the Chair declares the House in recess until 10 a.m.

Accordingly (at 9 o'clock and 27 minutes a.m.), the House stood in recess until 10 a.m.

□ 1000

AFTER RECESS

The recess having expired, the House was called to order by the Speaker pro tempore (Mr. PEASE) at 10 a.m.

PRAYER

The Chaplain, the Reverend James David Ford, D.D., offered the following prayer:

Remind us, O gracious God, that we are to be doing the works of justice and mercy in our communities and in our world. And as we seek to do the works of justice remind us again that we are not the message, but we are the messengers of reconciliation and peace and righteousness. We admit that we can become so involved in what we do that we promote ourselves and we become the focus instead of pointing to the way of truth and promoting the good works of justice for every person.

May Your blessing, O God, that is new every morning be with us until the last moments of the day, abide with us this day now and evermore. Amen.

THE JOURNAL

The SPEAKER pro tempore. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Pursuant to clause 1, rule I, the Journal stands approved.

PLEDGE OF ALLEGIANCE

The SPEAKER pro tempore. Will the gentleman from Pennsylvania (Mr. PITTS) come forward and lead the House in the Pledge of Allegiance.

Mr. PITTS led the Pledge of Allegiance as follows:

I pledge allegiance to the Flag of the United States of America, and to the Republic for which it stands, one nation under God, indivisible, with liberty and justice for all.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Lundregan, one of its clerks, announced that the Senate had passed without amendment a concurrent resolution of the House of the following title:

H. Con. Res. 144. Concurrent Resolution urging the United States Government and the United Nations to undertake urgent and strenuous efforts to secure the release of Branko Jelen, Steve Pratt, and Peter Wallace, 3 humanitarian workers employed in the Federal Republic of Yugoslavia by CARE International, who are being unjustly held as prisoners by the Government of the Federal Republic of Yugoslavia.

THE VALUE AND NECESSITY OF A STRONG MINING INDUSTRY IN AMERICA

(Mr. GIBBONS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GIBBONS. Mr. Speaker, over the next few weeks I will be bringing to our colleagues and the Chair's attention the value and necessity of a strong mining industry in our Nation.

Mr. Speaker, nearly everything we eat, touch, wear, use, or even live in is made possible by the mining industry. Minerals comprise the basic necessities of life. Mineral-based fertilizers make possible the food we eat and the natural fibers in our clothes. From the concrete foundation, to the wallboard, pipes, and wiring, all the way up to the shingles on the roof, the construction industry utilizes minerals for building our homes.

Mr. Speaker, minerals, made possible through the mining industry, are essential for agriculture, construction, and manufacturing. The United States is one of the world's leaders in the production of important metals and minerals, and it is imperative that we maintain a strong mining industry, and remain competitive with other nations for scarce investment of capital.

Many investors have already left the United States for Latin America and Asia, where they are not faced with endless delays regarding Federal proposals, permits, expensive fees, and all sorts of other bureaucratic red tape.

Mr. Speaker, it is in our Nation's best interests to keep our mining industry strong.

OUR COUNTRY'S UNBELIEVABLE POLICY ON STEEL

(Mr. TRAFICANT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. TRAFICANT. Mr. Speaker, after World War II we gave tours of our steel mills to Japan and Germany. We let them take pictures. We gave them blueprints. We even gave them foreign aid so they could build their own steel mills.

Today Japan and Germany have steel mills. America has photographs. If that
